

LI FA SHUN INTERNATIONAL CO., LTD.

QC/Technical Support

QC process is implemented by our in-house QC staff which is composed of our engineers and trained production personnel. We are equipped with a series of specialized QC equipment including cable tester, auto flame tester, micro computer, digital thermometer and cable bending machines.

Production materials are inspected before they reach production lines. Next, QC inspection will continue during each stage of production. Then, products are randomly checked to further eliminate products failing to meet quality standards. Finally, finished products will be examined again before packing.

Our quality policy is to work closely with all our customers as partners and confirm beyond customers' specification.
